DWR's Statewide Priorities

Final IRWM Grant Program Guidelines - November 2012

Statewide	Description
Priority	Description of the contain mucinets that effectively address large to the latest and the contain mucinets that effectively address large to the latest and the contain mucinets that effectively address large to the latest and the contain mucinets that effectively address large to the latest and the contain mucinets that effectively address large to the contain mucinets and the contain mucinets
Drought Preparedness	Proposals that contain projects that effectively address long-term drought preparedness by contributing to sustainable water supply and reliability during water shortages. Drought preparedness projects do not include drought emergency response actions, such as trucking of water or lowering well intakes. Desirable proposals will achieve one or more of the following:
	 Promote water conservation, conjunctive use, reuse and recycling Improve landscape and agricultural irrigation efficiencies Achieve long term reduction of water use
	 Efficient groundwater basin management Establish system interties
Use and Reuse Water More Efficiently	Proposals that include projects that implement water use efficiency, water conservation, recycling and reuse to help meet future water demands, increase water supply reliability, and adapt to climate change. Desirable proposals include those with projects that: • Increase urban and agricultural water use efficiency such as conservation and recycling • Capture, store, treat, and use urban stormwater runoff (such as percolation to usable aquifers, underground storage beneath parks, small surface basins, domestic stormwater capture systems, or creation of catch basins or sumps downhill of development) or projects outlined in PRC §30916 (SB 790) • Incorporate and implement low impact development (LID) design features, techniques, and practices to reduce or eliminate stormwater runoff • Improve the water supply reliability of the Sacramento-San Joaquin Delta
Climate Change Response Actions	Water Management actions that will address the key Climate Change issues of: • Assessment of Vulnerabilities as a Result of Climate Change • Adaptation to Climate Change • Reduction of Greenhouse Gas (GHG) Emissions • Reduce Energy Consumption
	Proposals that contain projects that when implemented address adaptation to climate change effects in an IRWM region. Desirable proposals include those that: • Advance and expand conjunctive management of multiple water supply sources • Use and reuse water more efficiently • Water management system modifications that address climate change impacts, such as rising sea-level, and which may include modifications or relocations of intakes or outfalls • Establish migration corridors, re-establish river-floodplain hydrologic continuity, reintroduce anadromous fish populations to upper watersheds, and enhance and protect upper watershed forests and meadow systems
	Proposals that reduce GHG emissions compared to alternate projects that achieve similar water management contributions toward IRWM objectives. Desirable proposals include: • Reduce energy consumption of water systems and uses • Use cleaner energy sources to move and treat water
	Proposals that contain projects that reduce not only water demand but wastewater loads as well, and can reduce energy demand and GHG emissions. Desirable proposals include: • Water use efficiency • Water recycling • Water system energy efficiency • Reuse runoff

Statewide Priority	Description
Expand	Proposals that contain projects that practice, promote, improve, and expand environmental
Environmental	stewardship to protect and enhance the environment by improving watersheds, floodplains,
Stewardship	and instream functions, and to sustain water and flood management ecosystems. Also,
	proposals that contain projects that protect, restore, and enhance the Delta ecosystem
Practice	Proposals that contain projects that promote and practice integrated flood management to
Integrated	provide multiple benefits including:
Flood	Better emergency preparedness and response
Management	Improved flood protection
	More sustainable flood and water management systems
	Enhanced floodplain ecosystems
	LID techniques that store and infiltrate runoff while protecting groundwater
Protect	Proposals that include:
Surface Water	Protecting and restoring surface water and groundwater quality to safeguard public and
and	environmental health and secure water supplies for beneficial uses
Groundwater	• Salt/nutrient management planning as a component of an IRWM Plan
Improve	Proposals that include the development of Tribal consultation, collaboration, and access to
Tribal Water	funding for water programs and projects to better sustain Tribal water and natural resources.
and Natural	
Resources	
Ensure	Proposals that:
Equitable	• Increase the participation of small and disadvantaged communities in the IRWM process.
Distribution of	• Develop multi-benefit projects with consideration of affected disadvantaged communities
Benefits	and vulnerable populations
	• Contain projects that address safe drinking water and wastewater treatment needs of DACs
	• Address critical water supply or water quality needs of California Native American Tribes
	within the region
	• Help meet State policies intended to provide access to safe, clean, and affordable water
