Prioritized Climate Change Vulnerabilities from 2013 IRWM Plan

Using DWR’s *Climate Change Handbook for Regional Water Planning*, the Climate Change Workgroup developed an analysis of the Region’s vulnerabilities. This analysis was the primary activity of the Climate Change Workgroup during their June 2012 workshop. Once vulnerabilities were identified, they were ranked and categorized. Vulnerabilities were categorized into five priority levels: Very High, High, Medium, Low, and Very Low. **Table 7-16**, below, shows the vulnerability issues and their respective rankings. Details regarding processing of vulnerabilities can be found in the Climate Change Study, included in the 2013 IRWM Plan as Appendix 7-D.

**Table 7-16: Prioritized Climate Change Vulnerability Issues**

<table>
<thead>
<tr>
<th>Priority Level</th>
<th>Category and Vulnerability Issue</th>
</tr>
</thead>
<tbody>
<tr>
<td>Very High</td>
<td>Water Supply: Decrease in imported supply</td>
</tr>
</tbody>
</table>
| High           | Water Supply: Sensitivity due to higher drought potential   
|                | Water Quality: Increased constituent concentrations   
|                | Flooding: Increases in flash flooding and inundation (extreme weather)   
|                | Ecosystem/Habitat: Decrease in available necessary habitat   
|                | Sea Level Rise: Inundation of storm drains and sewer systems   
|                | Ecosystem/Habitat: Decrease in ecosystem services |
| Medium         | Water Demand: Crop demand would increase   
|                | Water Demand: Industrial demand would increase   
|                | Water Supply: Decrease in groundwater supply   
|                | Water Quality: Increase in treatment cost   
|                | Sea Level Rise: Damage to coastal recreation / tourism due to inundation |
| Low            | Water Demand: Limited ability to conserve further   
|                | Water Supply: Lack of groundwater storage to buffer drought   
|                | Water Quality: Increased eutrophication   
|                | Flooding: Increases in inland flooding   
|                | Ecosystem/Habitat: Increased impacts to coastal species |
| Very Low       | Water Demand: Limited ability to meet summer demand   
|                | Water Supply: Invasive species can reduce supply available   
|                | Water Quality: Decrease in recreational opportunity   
|                | Sea Level Rise: Decrease in land   
|                | Sea Level Rise: Damage to ecosystem/habitat   
|                | Ecosystem/habitat: Decrease in environmental flows   
|                | Hydropower: Decrease in hydropower potential |
